

Flow

hand-drawn, cord-, electrically operated
for consistent pleats in curtains

The ideal solution for classic elegance

hand-drawn, cord-, electrically operated
for consistent pleats in curtains

elegant & stylish

The Qurails Flow System keeps pleats in curtains consistent. It can be used with small and wide channel tracks and, because of the broad assortment of components, it can be integrated in hand-drawn, cord-pulled and electrically operated systems. The Flow System can also be used with curved curtain tracks..

Flow gliders

Flow gliders rotate on a cord and are placed along a track at set distances of 60 or 80 mm. Flow gliders can be used with the following Qurails track profiles:

Profile 2000 series:
2014-12
rotating glider on cord
small channel 60 or 80 mm

Profile 4000, 5000, 6000 series:
4014-12
rotating glider on cord
wide channel 60 or 80 mm

Curtain tape

The Qurails Flow System has two types of curtain tape for distances of 60 mm and 80 mm, respectively. See application example “Curtain tape” on the next page for dimensions of the two types of curtain tape for pleat folds of 200%, 250% and 280%.

The tape is coated with an adhesive so that it can be ironed onto the curtain fabric before being permanently sewn. In this way, it will not shift in position while the curtains are being made.

In addition, red markings have been placed in the tape at points where curtain hooks can be placed.

Curtain hooks

Curtain hooks 2021-FL can be inserted in the pockets by the markings matching the chosen pleat fold.

Confection

Curtain package

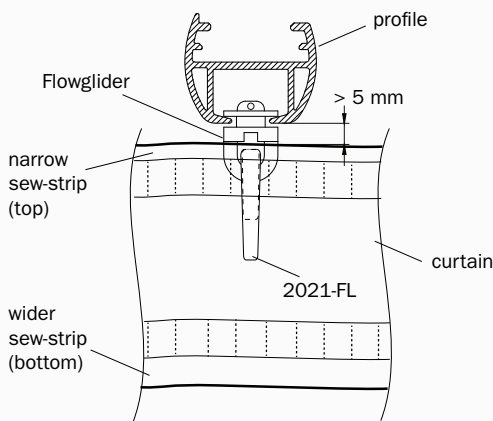

Package height: up to 3 metres because the pleat appearance at the bottom of the curtain.

Package width: up to 5 metres (single package) making a total of 10 metres for a pair.

Sewing advice

Allow a minimum of 5 mm free space between the underside of the chosen track and the top edge of the curtain. It is important to do this to stop the curtain from catching.

The curtain tape should be ironed on first and the permanently sewn with the narrow strip facing upwards.

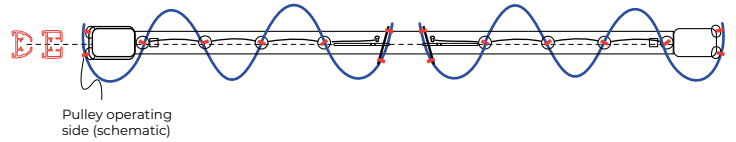

Application example

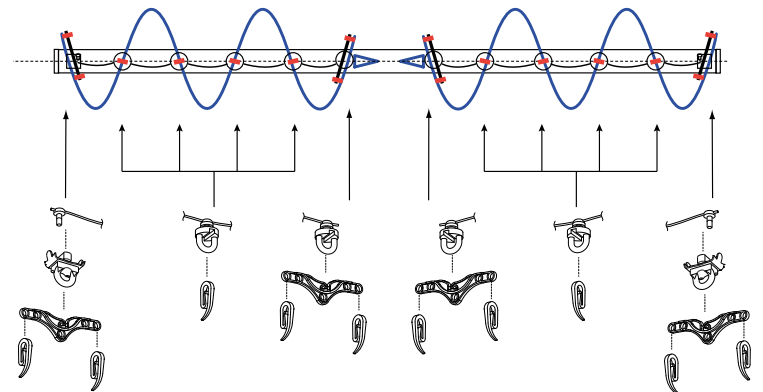

Overview of various hand, cord and electrically operated situations. In the diagrams, the Flow parts are always shown with a symbol.
